

Denver International Airport — Executive One-Pager

From a stalled Cisco Spaces pilot to an AI-Ready Airport. The Field CTO reframed a dead-end dwell-time pilot into a multi-year, cross-architecture transformation: **Cisco Spaces + Splunk** turn Wi-Fi into **real-time spatial intelligence** that grows concession revenue and operational efficiency — expanding Cisco from a vendor into a **trusted partner** and supporting DEN's **Vision 100** growth.

Customer: Denver International Airport (DEN) · **Motion:** Field CTO X-Arch (outcome-led) · **Platforms:** Cisco Spaces + Splunk (on Cisco wireless → SDA) · **Status:** Active & expanding

SITUATION → REFRAME

- A **Cisco Spaces pilot had stalled** (passenger dwell time for a concessions & marketing campaign). The **account team brought in the Field CTO** to meet the **CTO** and review the airport authority's initial use cases.
- We reframed a **tactical pilot** into a **business-outcome program** — passenger flow & spatial intelligence across the concourses — moving DEN from "keeping the lights on" to a **digital-transformation journey**: an **Airport of the Future / AI-Ready Airport**.

STAKEHOLDERS

CTO (champion) · **CFO** (validator) · **Sr. Director, Infrastructure** (technical owner) · **Concessions** (revenue owner). **Shared outcome:** turn the network into real-time spatial intelligence that grows revenue and drives efficiency.

THE CROSS-ARCHITECTURE SOLUTION

Pillar	What DEN gets
Secure Networking	Cisco Spaces on Cisco wireless; campus wireless + wired → SDA modernization
Observability & Data	Splunk analytics turning Wi-Fi location data into real-time spatial intelligence
AI-Ready Infrastructure	The data + modern-infra foundation for the AI-Ready Airport
OT (in progress)	Follow-on workstream; read-only / passive / human-in-the-loop boundary applies

QUANTIFIED OUTCOMES (ILLUSTRATIVE — VALIDATE WITH DEN)

Anchored to public DEN data: **82.4M passengers (2025)**, an airport built for 50M pursuing **Vision 100**; **\$608M** non-airline revenue (2024).

Value lever	Illustrative annual value
Concession uplift (dwell-time / spatial, +2%)	+\$1.8M airport (+\$9.9M concessionaire sales)
Marketing / advertising yield (+5%)	+\$1.0M
Operational efficiency (passenger flow, +1.5%)	+\$2.3M
Observability / tool TCO (Splunk consolidation, -20%)	+\$1.0M
Capacity deferral (Vision 100)	size with DEN
Airport-side recurring total	≈ \$6M/yr (range \$4–8M)

Parameters (illustrative): spend/enplaned pax \$12 · airport rent capture 18% · advertising base \$20M · addressable ops base \$150M · monitoring TCO base \$5M — replace with DEN actuals in a half-day value workshop.

DURABLE GROWTH FOR CISCO

- EA expanded to include Splunk + Cisco Spaces**; multi-year **wireless + wired (SDA)** modernization runway.
- Vendor → trusted partner** — value measured in DEN's terms (revenue, efficiency, capacity). Proof: the airport **renamed the program** the "Ryan Casey project."

NEXT STEP

Half-day **value workshop** (CTO, CFO, Infrastructure, Concessions) to replace the illustrative inputs with DEN actuals → a committed, board-ready business case.

Internal account brief. Narrative reflects the engagement as related by the account team; public figures cited (flydenver.com, 2026; City of Denver Auditor, 2026); uplift percentages are benchmarks to validate with DEN — not reported DEN financials. Consistent with the Field CTO X-Arch motion and financial approach (README.md, 06-financial-model.md).
